# In the First Place

E have been in business since 1864. This is our thirtyseventh year. The excellence of our product gave us that early start, and our successful effort to improve it has kept us at the front.

We are the largest manufacturers of the products of gypsum in America, with an annual capacity of over one hundred and fifty thousand tons of finished material.

Alabaster Cement Wall Plaster is the particular product to

which we call your attention. It is the perfection of wall plaster.

Every step in its manufacture from nature's products is carried on
in our own factories by men experienced in their work.

The absolute knowledge of the nature, age and strength of every ingredient gives us the renowned uniformity of Alabaster.

The purity of the gypsum and our process of manufacture make labaster the strongest wall cement made.

The scientific formula used produces as smooth working a material as was ever offered to the plasterer,

# How To Use It

N order to secure the best results it is only necessary to exercise caution in selecting a clean sharp sand and to thoroughly mix plaster and sand before adding water. After mixing with sand do not allow it to stand but add

water at once. The sand itself contains a considerable amount of moisture and the plaster absorbs this if allowed to stand, and thus sets up quicker and does not work as well. Do not temper or mix at one time more than can be applied in one hour. For Lath Work, use two parts, clean sharp sand to one of

Alabaster.

For Brick and Terra Cotta Work, use three parts, clean sharp

sand to one of Alabaster.

For Wainscoting, where a hard surface is required use equal

parts of clean sharp sand and Alabaster.

Grounds and Jambs should be three-quarters of an inch for lath work, one half inch for brick work and three-eighths of an inch for tile work.

Brick, Stone and Tile Work should be well sprinkled one hour before plastering, and may be floated before mortar begins to set, never atterwards.

Dry Lath should be sprinkled one hour before plastering.

QUARRY, ALABASTER, MICH.

# Our Quarry

the rock, averaging twenty feet in depth, stands ready for steam shovels and drills.

As shown by accompanying illustration, it is necessary to remove several feet of earth from the surface. This is done by two modern steam excavators; the earth excavated being carried away by cars and locomotive.

Close behind the shovels come the ever pounding steam drills, driving holes at regular intervals into the rock. Into these holes great quantities of giant powder are placed. Battery blasts are made twice daily, varying in size from 300 to 2,000 tons. The blasted rock is again broken and reduced in size and then transported on our own railroad to the Alabaster Mills, or loaded direct in our own vessels for shipment to the Chicago plant.

MILLS AT SOUTH CHICAGO, ILL.

## After A11

is strength and quality that tells. In the past year Alabaster has more than doubled its sales. We are trying to repeat the performance and double again this year. The best soon becomes the biggest. The object of all our printed matter, is to get you to try Alabaster, not to buy it. We depend on the plaster itself to do the selling.

This Advertising Stuff is usually hustled direct to the waste basket. It does its work if you have become interested enough to try even one little bag. By putting Alabaster on a wall you erect a lasting monument to its excellence and durability. A good, solid, sound wall. And better still, you do what we could not accomplish in a mile of talk, you convince yourself that Alabaster is the perfection of wall plaster, and from that moment on you erect more

We try to keep this little book out of the basket by making it useful. In the back of it are tables enabling one to find at a glance, the number of yards in any size room. This is valuable to anyone interested is walls. The tables are copyrighted. You will not find them elsewhere

monuments of the same kind.

Alabaster Mills, Alabaster, Mich.

#### A Few Testimonials.

A good way to learn about Alabaster is to read what a few of its friends say.

A better way is to call on them personally. We have dealers in your vicinity who have dalabaster for years. They can show it to you on the wall and convince you of its palways good. You may notice, by the way, that the firm selling Alabaster is the leading dealer.

The best way to learn about Alabaster is to try it yourself. Then you know.

THE ALABASTER CO. Chicago, Ill.

Gentlemen — I am familiar with all the hard mortars in use. The tensile strength of any mortar is the real test of quality. Your Alabaster Cement Plaster that I have used has the greatest tensile strength of any of the hard mortar that I have tested. It works well, and I can recommend it as the safest and beat hard mortar

JOSEPH EASTMAN.

MR. EASTMAN is of the firm of Smith & Eastman.

They plastered the World's Fair at Chicago with Alabaster and made it white. Now we are shipping boat load after boat load to them at Buffalo, where they are doing this work for the Pan-American Exposition. It is estimated that 15,000 tons will be used. There are five plaster companies within few mites of the Expoation grounds, and we are done and the expoation grounds, and we are done and of door; the very best is required, and Alabaster is used exclasively.

TOLEDO, OHIO, Oct. 6, 1900.
THE ALAHASTER COMPANY, Alabaster, Mich.

Gentlemen.—Replying to your inquiry regarding. Alabaster Cement Mortar, we are pleased to say to you that it is giving excellent satisfaction, making a hard solid wall, and works as well as lime mortar. It was hard to get the plasterers to use it at first, but they are equally as willing to use Alabaster as the old fashioned

We expect to have an excellent trade on it as the builders get to know it better.

Yours truly,
The Fren Roice Company.

## PLASTERING TABLES

with which anyone can find at a glance the number of yards plastering in any size room.

These tables give the number of square yards and feet in several thousand sized rooms. Example:—To obtain the number of square yards in a room 12x15x7 turn to the table giving measurement of rooms with 7 foot ceiling; follow down the column of figures on the left until you come to 12 then follow the figures to the right until you come to the figures directly under the figure 15, at the top of the page; the answer is 62 square yards.

These tables are copyrighted, and are the property of the Alabaster Company.

WRITE FOR

#### LIENO

Is the most economical, durable and beautiful wall finish in the world. A single trial will prove its superiority. It can be used for recording from time to time without danger of cracking or peeling off. It stops suction, does not show laps, works easily and makes soft, clear tints for frescoing.

LIENO can be used with success where everything else fails. Try it.

For stopping walls, modeling or free-hand relief work, LIENO has no equal, as it will not crack, chip or fall off.

LIENO can be used as an outside primer or filler for brick, wood, stone or iron walls. It is also fire-proof, and

for this reason can be used to great advantage in all kinds of factories, besides costing less than oil paint.
